

EFFICACY *in* EVERYTHING

Efficacy is the power to produce a desired result.

For more than 35 years, Ortho Molecular Products has partnered exclusively with health care providers to deliver nutritional solutions of the highest efficacy. The most trusted voices in health care put their trust in our products to help patients get better, faster.

Our commitment to science, careful raw ingredient selection, and strict quality standards goes into every supplement we formulate. All products purchased through health care providers come with efficacy guaranteed.

EFFICACY *in* FORMULATION

Evidence-based formulas and superior raw materials are in optimal potencies, so patients get better, faster.

FORMULATIONS THAT WORK

Evidence-Based

Evidence-based lifestyle and nutritional therapies will transform the practice of medicine, and we are dedicated to creating innovative clinical models and nutritional solutions to that end. Whether it is years of traditional use, observations in clinical settings, genomic and epigenetic studies, or well-controlled human clinical trials, our research team has the expertise to assess a wide range of data, allowing us to choose ingredients with precision.

Raw Material Superiority

Knowing the source, extraction methods, and manufacturing processes of each ingredient is the first step in producing efficacious products. With a long history in this industry, we have cultivated relationships with reputable raw material vendors. The raw materials chosen for our products are selected to match what is proven effective in clinical trials. Simply stated, we do not use inferior raw materials. Ever.

Therapeutic Potency

We always include the precise therapeutic potency of each ingredient, based on established research. Each formula includes only the therapeutic amount of ingredients and no additives, allowing for fewer capsules per serving and enhanced patient compliance. We are committed to formulation efficacy and the practitioner-patient relationship, which ultimately helps your patients achieve their best health possible.

EFFICACY *in* QUALITY

We rigorously test in our state-of-the-art, in-house laboratory to ensure purity, strength and composition.

QUALITY BEYOND WHAT'S EXPECTED

Even in the professional supplement channel, a variance in quality persists. We place the highest level of value, both monetarily and ethically, on producing efficacious products for the health care practitioners we serve.

Quality is intrinsic to our products not through word alone but through established, repeatable processes and systems. These include the following:

- We follow rigid SOPs (standard operating procedures) and MOPs (methods of procedure) throughout every stage of production, making our products not just efficacious, but consistently so.
- All raw materials are core tested upon receipt, meaning multiple samples are taken from all levels of the container, not just skimmed from the top. This process ensures that suppliers are not parsimonious with raw materials and that raw materials are not adulterated in any way. Through sample analysis, raw materials are examined for identity, microbiology and purity.
- We mix all of our raw materials in dedicated blending rooms using a gravity-fed powder distribution system, following strict protocols to ensure product consistency.
- After formulation, our thorough, verified cleaning process requires equipment to be shut down, dismantled and cleaned using an automated washer to protect against cross-contamination.
- We subject every new formula to stability testing, which involves assaying ingredients to detect any degradation, thus ensuring the formula meets label claim at expiration.

EFFICACY *in* MANUFACTURING

We manufacture our own formulas and control every step of the process—a rarity in today's industry.

MANUFACTURING TO A HIGHER STANDARD

We maintain a legacy of good manufacturing practices, instated long before cGMPs became compliance requirements. We stay up-to-date on industry research and testing methods, and fine-tune our manufacturing practices accordingly.

We own and operate a cGMP, FDA-audited manufacturing and distribution facility in Stevens Point, Wisconsin. The facility is equipped with high-performance HVAC and desiccant control that maintains ideal manufacturing conditions. Our staff are highly trained personnel who share a passion for efficacy.

Because we control the entire production process—from formulation, raw material sourcing, and manufacturing, to laboratory testing of incoming materials and finished products, to bottling and labeling—we are free to be perfectionists.

Our manufacturing facility is strictly controlled by rigorous standards that meet cGMPs, and it routinely passes FDA and third-party audits. Extensive testing on every lot we manufacture means you can trust the consistent purity, strength, identity and composition of each and every Ortho Molecular Products formula.

It's rare for a supplement company to handle all phases of production. But when your standards are as high as ours, you don't want to entrust it to anyone else.
